PROJECT

FYP: AI BASED JOB PORTAL (AI INTERVIEWER)

It will target both the user, organizations and applicant as it will help the organization to find an employee which can fit exactly as per their requirements and on the other hand it will make easy for the applicant to find the job easily while sitting in his home.

Features

- AI based interview system Using face-api algorithm for face emotion detection :After finding the most suitable candidate our project will do the verification through an AI based interview focusing on the confidence level of the candidate and in this interview only focus on basic HR related questions.
- Searching of best candidate : by judging their learning skills judge through training and then take quiz and technical judge through analysis and problem solving skill judge through game.
- A platform for applicant to apply for job :An applicant can easily see available jobs and apply for them while sitting in his room.
- A platform where organization post the job,check per month and per year feedback form the applicants.
- The organization can also see rank and history of the applicant about their AI based interview.
- There is also a admin panel which can see number of interview conduct , also manage the organization like block or delete the

organization if too many complain

received form people, Similarly block the account of the applicant.
